

SameSalt

The same medicine, for less. · AI for human health · Android

My grandparents take medicine every day, and every month there's another pharmacy bill. In India the same molecule is sold under **hundreds of brand names** at wildly different prices, and nobody at the counter tells you. **SameSalt reads a medicine strip and shows every identical, cheaper brand, what it costs today, and the nearest government generic pharmacy.**

246,068

Indian medicines, matched offline by exact composition

532

identical brands of paracetamol 650 mg alone

86%

cheaper: the lowest identical brand vs Dolo 650 (printed MRP)

33%

price gap for the same strip between online pharmacies, on one day

WHAT IT DOES

1. **Scan a strip** (or type a name). A vision model reads the brand and salt.
2. **Exact match**: every brand with the same salt, strength, dosage form and release type.
3. **Today's prices** at 1mg, PharmEasy, Apollo 24/7, Truemeds and more, per tablet, via SerpApi's Google Shopping API.
4. **Verified listings**: each one is checked against the database, so look-alike drugs never appear as substitutes.
5. **Jan Aushadhi Kendras nearby** (government generic pharmacies), via SerpApi's Google Maps API.
6. **Pharmacist card** asking for the salt, not the brand, in English and Hindi.

HOW IT WORKS

- React Native / Expo Android app with an on-device SQLite database built by a Python pipeline from a public dataset of 246,068 medicines.
- Each medicine gets a canonical composition key (sorted salts + strength + form + release type); identical keys mean identical medicine.
- A Cloudflare Worker keeps the API keys off the phone, calls Gemini 2.5 Flash for strip reading and SerpApi for prices and stores, and caches results.
- Matching, verification and every price calculation are deterministic code, not AI.

Safety first. For narrow-therapeutic-index drugs (thyroxine, warfarin, lithium...), where switching brands is risky, SameSalt refuses to suggest a substitute at all.

WHO IT HELPS

Families buying medicine every month, especially for chronic conditions like diabetes, blood pressure and thyroid, and anyone standing at a pharmacy counter wondering whether a cheaper, identical option exists. Informational only, not medical advice.
